The Wisconsin Research and Education Network (WREN) is a statewide practice-based research network (PBRN) of primary care clinicians and academic researchers. Its mission is to improve health outcomes for the people of Wisconsin through education, and through promoting and conducting primary care research in partnership with clinicians and the communities they serve.

**Highlights**

- **Sustainability.** WREN has been in continuous operation since 1987, making it one of the oldest PBRNs in the country.

- **Increased funding.** WREN has continued to attract high-quality, high-caliber projects supported by federal and local funding, including private foundations.

- **Engagement.** WREN now disseminates practical and research information to more than 1500 individuals, including clinicians, researchers and staff across the entire state of Wisconsin and beyond.

- **Statewide research.** During fiscal year 2014, WREN was engaged in 12 clinical and practice improvement research projects. Topics included patient safety, chronic kidney disease, cancer survivorship, influenza surveillance, vulvovaginal atrophy, clinician-patient communication, and diabetes management.

- **National Association.** WREN is a member of two AHRQ-funded Research Centers in Practice-Based Research and Learning consortiums. These consortia accelerate the generation of new knowledge and a community of learning for primary care practices to improve quality, patient safety, and effectiveness of care.

- **Patient outcomes oriented.** WREN participated in two studies that were included in a meta-analysis of the use of macrolides for the treatment of severe, uncontrolled and/or refractory asthma. This meta-analysis found macrolides were beneficial for improving symptoms and quality of life, as well as improving peak expiratory flow and airway hyper-reactivity. Results such as these contributed to WREN Director, Dr. David Hahn, being profiled in a front-page article of the Wisconsin State Journal.
