

The health curriculum for the WI State Prison project is currently in its pilot phase. We have reviewed the materials, and are constructing a time line to teach the curriculum in several sessions throughout the academic year. We will have a meeting in the coming weeks to organize student volunteers to teach the curriculum. We are also inviting Mr. Alan Frank, from the Department of Corrections, to provide training to student volunteers. Furthermore, over the summer we met with representatives from the Department of Corrections to discuss establishing a long-term relationship between the UW Medical School and State Prisons. By setting up a strong foundation, we hope that this collaboration may continue even after our current participation.
